Turkish Qualified Engineering Services Company offers Turnkey Production Plant Solutions

Despite the fact that it is a brand new company founded only at the beginning of 2015, "MCA Engineering Industry and Foreign Trade Co. Ltd.", by following the latest technologies, gives service in order to supply the needs of several sectors both locally and abroad, such as engineering, machinery, molding and turnkey plant projects, with its dynamic staff experienced in engineering and international industry for almost 20 years.

By also following the emerging technologies in all stages of projects, such as design, production, quality control, commissioning and after-sales, our company performs the most comprehensive work in order to achieve the target of finding reliable, functional and economic solutions for its customers.

"MCA Engineering Industry and Foreign Trade Co. Ltd.", which designs and produces machines, production lines and plants especially for the metal forming sector, by establishing solution partnerships with many branded domestic and foreign machinery and plant manufacturers, creates customer needs-oriented solutions.

"MCA Engineering Industry and Foreign Trade Co. Ltd.", with the technologic, solution-oriented and economic services, provides support for companies operating in a variety of sectors to increase their production quality and efficiency, to decrease their costs and expand their market shares. "MCA" takes as its fundamental principle, to respond the new needs, emerging each passing day, of the serviced sectors, by creating a long-lasting mutual trust partnership environment with its suppliers as well as the serviced companies. Some of the sectors in which we operate:

Metal and Machine Industry

Heavy Industry

Automotive Industry

Petrochemical and Chemical Industry

White Goods Industry

Food Industry

Turkish ICT company offers innovative productivity and quality measurement system to factories

A Turkish company (ARGE BILISIM LTD) from ICT sector developed an innovative complete solution for productivity and

quality measurement of employees, products and whole manufacturing operation. This company has made a good reputation in confection, automotive and furniture sectors and reached a good number of clients in Turkey. Now they would like to extend their products and services to Eastern European factories. Commercial agreement with technical assistance type partnership is sought out.

Advantages and Innovations:

The service and product package that the company provides to its clients is totally different from similar alternative MRP (manufacturing resource planning) softwares.

It is a based data collection (barcode, RFID, digital, analog), real-time processing, which was developed in a modern manufacturing resource planning system consisting of software and hardware and it is supported by an ongoing industrial engineering consultancy for better application.

Benefits:

Process planning(worksheet preparing) can be done easily.

Contributes to the price list with the cost of labour.

Productivity, quality measurement and tracking are done by using the optimum number of barcode

Measuring the productivity in real time.

Sources of unproductiveness can be seen at the right time.

Facilitates timely response to the source of inefficiency raising productivity in this way.

Measuring the quality in real time.

Poor quality sources can be seen on time.

Facilitates timely response to the source of poor quality raising it in this way .

Allowing competition by the raise of the efficiency and the quality.

By using human psychology, it ensures the increase of the efficiency and the quality .

Implementation of the bonus system which is based on efficiency and quality.

Promoting efficiency and quality by bonus system.

Without requiring any other data except barcodes which are needed for efficiency ,traceability input and output quantities for order in real time.

Type and Role of Partner Sought:

The partner client should be manufacturing company especially in confection, textile, automotive spare parts, furniture and food industries. The client with a complex manufacturing operations (products with many sub manufacturing and assembly stages) will benefit most from the company's services and products.

Innovative Bee Products Manufacturer is looking for distributors

Company History:

Our company was founded in May 2013, by Prof. Dr.Dilek Boyacıoğlu, an expert in the manufacturing of food products and Aslı Elif Tanuğur who has many years of experience in quality control, R&D, project development and execution areas in the bee products industry as well as hands-on sector experience in this industry. With his many years of experience in the bee products industry and the projects he realized, our team member Taylan Samanci, an agricultural engineer, is a renowned expert in his field, who also manages the company's production functions based on the

“Contracted Bee Products Manufacturing Model”.

Our company was founded as Part of KOSGEB in ITU Maslak campus with the R&D project titled “Categorization of Propolis Based on its Sensory, Biological and Chemical Properties and Development of Processing Methods To Make Propolis Suitable for Human Consumption” and continues to carry out activities and functions related to this project as well. The purpose of the project is to develop special processes unique to propolis production in order to make it suitable for human consumption. A contracted production model was developed that allows Beekeepers and Beekeepers’ Associations to produce propolis under controlled conditions on behalf of our company. With this model, we plan to carry out production activities in different regions with vegetation appropriate for propolis at the trial level. Propolis obtained will be categorized based on its biological, sensory and chemical properties to determine processing techniques that are capable of preserving its biological activity and properties at the maximum level and resulting in a product that is suitable for human consumption. Another benefit of the project is that it will allow us to determine the technical specifications of the propolis that is unique to our country.
