Bilateral Meetings

- Friday 12:40 - 17:00

Description

IKL - Industrial Combine Foundry Guca was founded in 1958, and since its inception, the main and predominant activity was the casting of iron and steel. On March 31, 2017, the foundry became the property of Progres Engineering from Cacak and started to operate as an independent legal entity with 100% of private ownership. In addition to the main activity, the combine deals with finishing and machining of castings and metals, production of furnaces and stoves for solid fuel. During its existence, the technological and personnel capabilities of the combine, as well as the product range, changed in line with technological innovations in the field of foundry, in accordance with the requirements of the domestic and foreign markets. Due to the exceptional quality of castings, the foundries next to their own production, produce parts and components for many producers of furnaces and boilers according to their models and drawings. The foundry is technically and technologically equipped for the casting of castings for the needs of the mining industry, electrical industry, construction, cement industry, auto industry and tractor industry, thermal industry, machine industry.
